Summary

Frontend engineer with 4+ years shipping production interfaces in React, Next.js and TypeScript across data-heavy dashboards, CMS-driven sites and Shopify storefronts, including the network operations dashboard for Tejas Networks, whose equipment carries India's telecom backbone. I treat performance as part of the build, with measurable Web Vitals and bundle wins on every product I have owned, and reach past the frontend when needed.

Skills

Frontend: JavaScript (ES6+), TypeScript, React, Next.js, Hooks, Context API, Redux, React Query, JointJS, Tailwind, MUI, SCSS

Performance & Architecture: Code splitting, lazy loading, Web Vitals (LCP, CLS, TBT), image optimisation, component architecture, design systems

Backend & Cloud: Python, FastAPI, REST APIs, AWS S3 (presigned URLs, multipart uploads)

Commerce, CMS & Tools: Shopify, Liquid, metafields, Framer with custom code components, Git, Webpack, GitHub Actions, Vercel, Netlify, Figma

Experience

Frontend Developer, The Summer Design

Jan 2026 – Present

Remote

previously Feb 2024 – Dec 2024

- Took **sole project ownership** of a **25+ page CMS-driven site** in Next.js for a real estate developer, spanning residential, commercial and industrial catalogues with filtered listings.
- Owned page performance and responsiveness sitewide, validating layouts across **3–4 breakpoints** and optimising image delivery through WebP, lazy loading and responsive sizing.
- Built a heavily image-led studio site in Framer extended with custom React code components, plus reusable component and layout systems scaling work across client projects.

Independent Frontend Contractor & Content Creator

Jul 2025 – Dec 2025

Bangalore

- Contracted part-time with The Summer Design on client frontend work while running a self-employed content business, delivering **40–50 brand collaborations** end to end.

Software Developer, Birbal AI | Client: Tejas Networks

Jan 2025 – Jun 2025

Remote

- Learned JointJS from scratch while the library was still under active development and shipped it into Tejas Networks' live frontend and backend architecture migration **within a week of first exposure**.
- Built Tejas Networks' network operations dashboard in React and TypeScript with MUI and dynamic network graphs, covering node display, server-side GUI and node/link edit flows; **cut graph update latency by 30%** through lazy-loaded segments and render optimisation.
- Engineered an AWS S3 multipart upload pipeline for an AI interview platform, splitting large video files into parallel chunks with resume-on-failure and **reducing average chunk size and local memory usage by 80%**; designed presigned URL endpoints with the backend team.
- Rebuilt the Next.js corporate site's components and asset pipeline with code splitting, WebP and lazy loading, lifting **Lighthouse from 60 to 80 on mobile and 65 to 85 on desktop**, validated with real-user monitoring.

Software Engineer, MLVeda

Jun 2021 – Nov 2023

Ahmedabad, IN

- Owned frontend development in Liquid and JavaScript across client stores and MLVeda's in-house Shopify apps sold as merchant tools, covering multi-country pricing, currency switching, checkout and recommendations.
- Revamped Multi-Country Pricing for Shopify 2.0, **cutting setup time by nearly 80%** by eliminating theme dependencies, and **single-handedly integrated the apps into nearly 200 merchant storefronts**.
- Built and launched a note-taking app on Thinkific with advanced editing and PDF download, lifting active session duration; raised Shopify storefront page speed to **80+** through LCP, CLS and TBT work and image optimisation.

Projects

- **Cycle** | a cart-prep agent for Swiggy Instamart, approved through **Swiggy's Builders Club**. Built solo.
- **Collab Tracker** | collaboration tracking tool for creators, built and shipped end to end.

Education

Bachelor of Technology, Ahmedabad University

Information and Communication Technology
